TEST RESULT(S):

Test method : BS 5852 – Part II:1982
Ignition source : Crib ignition source 5 as specified in BS 5852 – Part II:1982
Conditioning of test specimen : A minimum of 16 hours at 20 ± 5°C and 50 ± 20% R.H.
Test condition : Temperature : 23°C
Relative humidity : 57%

The following test results relate only to the ignitability of the combination of upholstery composites under the particular conditions of test; they are not intended as a means of assessing the full potential fire hazard of the materials in use.

Test Result:

Ignitability performance index: P5(Non-ignition/Pass). See summary below:

Criteria of failure (Clause 4 of BS 5852 – Part II: 1982)

Progressive smouldering failure

**Note:**
1. The flame ceased for 3 minutes 24 seconds for 1st test and 3 minutes 28 seconds for 2nd test.
2. If failure against the criteria of clause 4 of BS 5852:Part II has occurred but only by way of damage exceeding the limits defined in clauses 4.1(e), 4.1(f) and 4.2(f) and provided that the resultant mass loss (initial mass less final mass) is less than 60g the foam passes the ignitability test.

**Remark:**
1. N.A. denotes: Not applicable
2. The Ignitability performance index of sample is designated by the number of the ignition source to which the sample was subjected under BS 5852:Part II:1982 preceded by the letters ‘P’ if the specimen passed that test or by the letter ‘F’ if it failed.
